

💡 **The Golden Rule in Answering Judges:** Always acknowledge the question respectfully ("That is a crucial question..."), never argue or get defensive, state your exact solution in 2-3 crisp sentences, and finish with a strong positive.

Category 1: Legal Accuracy & Liability

Q1: "What if your AI gives wrong legal advice and someone gets arrested or loses their case? Who is legally responsible?"

ANYONE / KAMRAN / SWAPNA / SHREYA

⚠️ **Trap:** Never say "Our AI never makes mistakes" or "It's just a student project so nobody will sue us."

✅ **Say This:** "That is a critical distinction. NYAYI provides **legal literacy, procedural awareness, and statutory education**—it explicitly does not provide formal legal representation or establish an attorney-client relationship. Just like WebMD educates a patient before they visit a doctor, NYAYI prepares a citizen with verified sections and action steps. Our prominent statutory disclaimer ensures full compliance with the Advocates Act 1961, and we actively advise consulting a licensed advocate for court proceedings."

Q2: "LLMs are famous for hallucinations. How do you stop Gemini from inventing fake case laws or non-existent sections?"

TECH: FARHAN / PRESENTERS

⚠️ **Trap:** Don't give a vague answer like "We told the prompt to be accurate."

✅ **Say This:** "We employ a strict **three-layer guardrail architecture**. First, our system prompt strictly binds the model to verified central statutes (IPC, BNS 2023, CrPC, Consumer Protection Act) and instructs it to refuse unverified case citations. Second, our temperature setting is dialed low to favor deterministic statutory accuracy over creativity. Third, on **nyayi.in**, our core library of 1,400+ guides and concordance tables is static and pre-verified, meaning citizens have zero risk of hallucination for core laws."

Category 2: Why Not Just Use ChatGPT?

Q3: "Why would anyone use NYAYI when they can just open ChatGPT or Google Gemini directly on their phone?"

PRESENTERS / ALL

⚠️ **Trap:** Don't say "ChatGPT doesn't know Indian law." (It does, but it's not structured for citizens).

✅ **Say This:** "ChatGPT is a generic text prompt. A distressed citizen who just got scammed or evicted doesn't know what prompt to write. NYAYI is a **complete, contextual citizen experience**:

- 1) We have the **July 2024 BNS Criminal Law Concordance Tool** built-in.
- 2) Our **Voice Studio** lets users speak naturally with a 3.5s silence buffer and pause/resume buttons.
- 3) We provide **Action Playbooks** (like exact FIR complaint drafts, Cybercrime 1930 protocols, and 1-tap SOS emergency calling) which ChatGPT cannot do."

Q4: "Will lawyers and Bar Councils oppose your project because you are taking away their clients?"

KAMRAN / SHREYA

⚠️ **Trap:** Don't say "We want to disrupt and eliminate expensive lawyers."

✅ **Say This:** "Quite the opposite—lawyers actually welcome NYAYI! Today, advocates waste hours in preliminary consultations with clients who have no documentation or no valid legal grounds. NYAYI acts as a **citizen triage filter**. When a citizen approaches an advocate after using NYAYI, their facts are organized, applicable sections are identified, and the advocate can focus on actual courtroom advocacy. We are creating a pipeline of better-informed clients."

Category 3: The New Criminal Laws (BNS 2023)

Q5: "A crime was committed in January 2024, but reported in August 2024. Which law applies, and does NYAYI handle this retroactivity?"

LEGAL: KAMRAN / SHREYA

⚠ **Trap:** Don't say "Everything is now BNS 2023 automatically." (Violates Constitution Art. 20(1)).

✅ **Say This:** "Yes, NYAYI accounts for this fundamental constitutional principle. Under **Article 20(1) of the Indian Constitution** (Protection against ex-post facto laws), substantive criminal offenses committed before July 1, 2024, are prosecuted under the **Indian Penal Code (IPC 1860)**, while procedural steps follow BNSS. Because NYAYI provides **bidirectional mapping** (IPC to BNS and BNS to IPC), citizens and junior lawyers can cross-reference both codes simultaneously without legal error."

Category 4: Voice Studio, Accents & Usability

Q6: "What happens if someone speaks in a noisy environment or has a heavy regional Indian accent?"

UI/UX: HARSH / TECH: FARHAN

⚠ **Trap:** Don't say "Users must go to a quiet room."

✅ **Say This:** "We built our Voice Studio specifically for real-world Indian conditions:
 1) Our **3.5-second silence debounce timer** ensures natural breathing pauses are not misread as silence.
 2) The **Pause & Resume Orb** gives users total control to stop listening when noise spikes, and resume when ready.
 3) The transcript is displayed live on-screen in clear text, allowing the user to review or edit before hitting Send.
 4) If voice input is ever challenged, our zero-friction text box is always available alongside."

Q7: "India has 22 official languages and millions of illiterate citizens. How does an English website help rural India?"

PRESENTERS: SWAPNA / SHREYA

⚠ **Trap:** Don't say "Everyone knows English now."

✅ **Say This:** "Our platform is built mobile-first and voice-first precisely for this reason. Our AI engine natively supports conversational Hindi and regional transliteration (Hinglish). In rural and semi-urban India, citizens often rely on CSCs (Common Service Centres) or young family members with smartphones. By providing spoken voice output and simple cards rather than dense legal PDFs, NYAYI enables any family member or panchayat volunteer to assist an illiterate citizen within seconds."

Category 5: Privacy, Crimes & Confidentiality

Q8: "If a user enters a query like 'I just hit a pedestrian with my car, what do I do?', do you log or report this to police?"

FARHAN / KAMRAN

⚠ **Trap:** Don't say "We report all criminals to police automatically." (Breaks user trust).

✅ **Say This:** "NYAYI does not collect personal identifiers, KYC, or permanent identity logs. Queries are session-ephemeral. For hit-and-run queries, NYAYI's guardrail triggers a responsible legal protocol: it advises the citizen of their legal duty under Section 134 Motor Vehicles Act and Section 106 BNS to arrange medical aid, reports penalties for fleeing, and directs them to the nearest police station or legal counsel immediately."

Category 6: Monetization & Running Costs

Q9: "API calls and servers cost money. If NYAYI is 100% free, how will you survive and sustain this long-term?"

SHREYA / FARHAN

⚠️ Trap: Don't say "We will show intrusive pop-up ads" or "We will ask for charity."

✅ Say This: "Our sustainability strategy has three clear tiers:

- 1) **Architectural Efficiency:** 80% of citizen queries are served by our static CDN knowledge hub (**nyayi.in**) which costs virtually ₹0 in API fees.
- 2) **Verified Advocate Directory (B2B):** Verified advocates pay a subscription listing fee to receive qualified citizen leads in their practice jurisdiction.
- 3) **Institutional & CSR Grants:** We qualify under Section 135 CSR for legal literacy initiatives and can partner with legal aid authorities (NALSA/SLSA) for subsidized compute."

Category 7: High Traffic & Scalability

Q10: "If 100,000 citizens open your website at the same time during a crisis, will the website crash?"

TECH: FARHAN

⚠️ Trap: Don't just say "We use the cloud so it scales."

✅ Say This: "This is precisely why we separated our platform into two pillars! **Pillar 1 (nyayi.in)** is deployed on global edge CDN caches as static, compressed assets. It can handle millions of concurrent hits without breaking a sweat. For **Pillar 2 (ai.nyayi.in)**, our Node.js microservice handles async API throttling, request queueing, and fallback caching for common queries, ensuring high uptime even during peak surges."

Category 8: Government Alignment & NALSA

Q11: "Why hasn't the government already built this? Can you partner with Department of Justice or Tele-Law?"

KAMRAN / SWAPNA

⚠️ Trap: Don't criticize the government ("Government websites are useless").

✅ Say This: "The government has fantastic initiatives like **Tele-Law** and **e-Courts**, but their primary challenge is citizen discovery and user experience. Most citizens find official portals hard to navigate on mobile. NYAYI acts as the **friendly citizen frontend**. Our vision is to collaborate with **NALSA** and **State Legal Services Authorities**, acting as the digital triage layer that prepares citizens before they connect with government-funded legal aid advocates."

❏ 3 Reminders When Ending Any Cross-Question Answer:

1. **Keep it under 35 seconds.** Don't ramble.
2. **Pass to teammates gracefully:** "Farhan can speak to the backend architecture..."
3. **Smile & say:** "Does that answer your question, Sir/Ma'am?"
